DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by US Patent 6,154,201 to Levin et al.

In reference to claim 1, Levin discloses a vehicle-mounted input unit provided with a manual manipulator (figure 1 and column 3 lines 17-25), position sensors (figure 3a, item 76) for supplying position signals corresponding to the direction and quantity in which the many manipulator is driven, actuators (figure 3a, item 70) for providing an external force to the manual manipulator, and a control section for controlling the actuators (column 10, lines 2-4). The control section computes the movable range of the manual manipulator from its current position to an end of its possible motion according to changes in position signals supplied from the

position sensors, and controls the output to the actuators according to the computed width of the movable range (column 10, lines 8-30).

The sections of claim 2-4 with the same preamble as claim 1 are rejected on the same grounds of rejections. In reference to the unique sections of claims 2-4, Levin also explains in column 19, lines 56-60 and column 19, line 66-column 20, line 3, that the control section computes the magnitude of the working force, speed, and acceleration applied to the manual manipulator according to changes in position signals supplied from the position sensors, and controls the output to the actuators according to the computed data.

In reference to claim 5 is rejected on the same grounds as the rejection of claim 1, with the added disclosure of Levin that manual manipulator is used to operate electric devices (column 4, line 20).

Referring to claims 6-10, Levin states that the vehicle-mounted input unit allows for a plurality of tables listing correlations between changes in the position signals and the output of the actuators are stored in the control section (column 20, lines 8-13), and a switching means for the tables is provided on or in the vicinity of the manual manipulator (column 5, lines 66-67).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ming-Hun Liu whose telephone number is 703-305-8488. The examiner can normally be reached on Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Mancuso can be reached on 703-305-3885. The fax phone numbers for the
